OBJECTIVE

High-achieving **Electrical and Electronics Engineering** student with a **9.22 CGPA**, specializing in power systems and embedded automation. Experienced in circuit simulation and hardware prototyping, with a focus on developing intelligent protection systems for electrical infrastructure.

EDUCATION

B.E. in Electrical and Electronics Engineering

2024 – 2028 (Expected)

Sona College of Technology, Salem

- Academic Standing: **9.22 CGPA**
- Core Competencies: Power Systems, DC Shunt Motors, Synchronous Machines, Circuit Analysis.

TECHNICAL SKILLS

Engineering Software:	Proteus Design Suite (Simulation), Arduino IDE
Programming:	Python, C-Programming
Hardware Interfacing:	Arduino Nano, ACS712 Current Sensors, Motor Control
Digital Skills:	Fast Typing, GitHub Pages (Web Deployment), Technical Documentation

KEY PROJECT

Automated Transformer Overload Protection System

- Designed an automated monitoring system to protect distribution transformers from overload-induced damage.
- Utilized **Arduino Nano** and **ACS712 current sensors** to detect surge conditions and execute automatic load shedding.
- Conducted full-scale circuit simulations in **Proteus** to validate protection logic before hardware implementation.

PROFESSIONAL EXPERIENCE

Freelance Portfolio Consultant

- Managed the end-to-end development and deployment of professional digital portfolios for college peers and seniors.
- Leveraged HTML/CSS and GitHub Pages to create high-speed, responsive technical websites.

TITANIUM 2026

Participant

- Actively participated in this technical symposium, focusing on industry-standard engineering practices and emerging technologies.

SOFT SKILLS & LANGUAGES

- Leadership:** Mentoring peers in digital branding and portfolio creation.
- Adaptability:** Quick transition between theoretical engineering and modern software tools.
- Languages:** English (Professional), Tamil (Native).
